Jl. Menoreh Barat VI No.45 Sampangan, Kec. Gajahmungkur, Kota Semarang

I am a graduate of Dian Nuswantoro University Semarang. The expertise I am currently pursuing is in the field of fullstack web developer. I want to hone my abilities and develop my skills by learning new things and learning to solve problems in life. My dream is to make my parents happy and be useful to the people around me.

Project Experiences

Binar Academy

Nov 2023 - Present

Fullstack Web Developer - Traditional Game (<https://traditional-game.herokuapp.com/>)

this project aims to develop a website that offers users the experience of playing traditional games such as batu, kertas, gunting (rock, paper, scissors) and tic tac toe. This website was built using Node.js technology with the Express.js framework to facilitate the development and management of web applications. Git is used as a tool to organize project source code in repositories.

Android Developer - Laundry Petir App

Aug 2021

In the process of creating an Android application project using the Java programming language and Android Studio Tools, in developing this application the CRUD concept is applied for data management. The CRUD (Create, Read, Update, Delete) concept allows users to perform basic operations on data in applications, such as adding new data, viewing existing data, updating existing data, and deleting unnecessary data.

Frontend Developer - Travel Ticket Web Application

Jun 2021

As a frontend developer who is responsible for creating a travel ticket web project using the PHP programming language dan framework Laravel, my job is to develop an attractive and responsive user interface. This project aims to present information about recommended tourist attractions in the Semarang area to users. Using Laravel, I can leverage a powerful framework to manage routin, databases, and business logic behind the scenes. This way, I can focus on attractive display design and intuitive user experience so that users can easily find the information they need about tourist attractions in Semarang.

Lamongan Indah - Semarang

25 Des 2022

Fullstack Web Developer – Reservation Lamongan Indah

Creation of Lamongan Indah reservation web application. This application was built using the Next.js framework as a fullstack developer who was responsible for designing the user interface and backend of the system. To store data, the application uses MongoDB as a database, ensuring reliability and scalability in storing and managing information. In this way, users can make reservations comfortably and safely, while data management is carried out efficiently to support overall application operations.

10 Jan 2024

Game Developer – Tile Vania (SKRIPSI)

As a requirement to fulfill my final assignment, I developed a 2D game using the Unity Platform. This game adopts the interesting MetroidVania sub-genre. In this game, enemies are equipped with artificial intelligence (AI) that allows them to perform various actions such as patrolling, teleporting, and chasing the player. Through the use of this technology, this game is expected to provide an interesting and challenging gaming experience for its players.

Kalih Coffee - Tegal

20 Mar 2024

Fullstack Web Developer – Kalih Coffee (<https://www.kalihcoffeetegal.shop/>)

Created a coffe ordering platform, Kalih Coffee Tegal. Users can explore various coffee and snack products, read full secriptions, and place orders easily. The shopping cart feature makes the purchasing process easier. With this service, Kalih Coffee Tegal provides a comfortable and practical coffee shopping experiences for its customers.
